

EPA 2021 – Toulon, a City Concept

Q-Park France | Category 2 | Refurbishment of Peiresc Car Parc

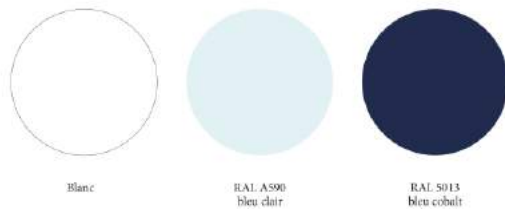

Toulon, a metropole in front of the Mediterranean sea

- 14th largest city in France, and its main military city
- Toulon Metropol decided in 2016 to outsource operations of its 10 old parkings in the city centre
- Q-Park set up a special City Concept for the municipality with dedicated design and service to the customer, called
« Park'ing Toulon by Q-Park »
- In 2020, after 2,5 years of work and more than EUR 20 million of investment, Q-Park delivered this unique concept

A City Concept – more than a simple refurbishment

- An holistic approach, integrating all dimensions of a "new generation" car park: design, comfort, service, technology, eco-responsibility, **art**
- Special graphic charter : colours inspired by the natural environment and the identity of the area
- All facilities have been refurbished with the same spirit and strong commitment but here we present in detail the Pereisc Marché parking

Exterior signage

Peiresc Marché : structural modifications

- New facade for a better integration in the environment
- Deep structural changes to solve accessibility issues
 - Enlargement of the vehicle access (entry /exit) to increase comfort
 - Creating a new elevator for disabled people and families
 - Opening of the wall in the ramp to optimise visibility

Modern design

- Fluid one way circulation for motorists
- Specific parking space design to help parking
- Large straight ramps
- High level lighting

More comfort and security for pedestrian

- Dedicated walkways
- Interior pedestrian doors remain open to ease circulation between staircase and levels of parking
(but close automatically in case of fire)
- Secured external access during the night
- Light colours and tiles all areas

Latest technology for a better customer experience

Dynamic parking
space guidance system

Dynamic
parking space
guidance
system

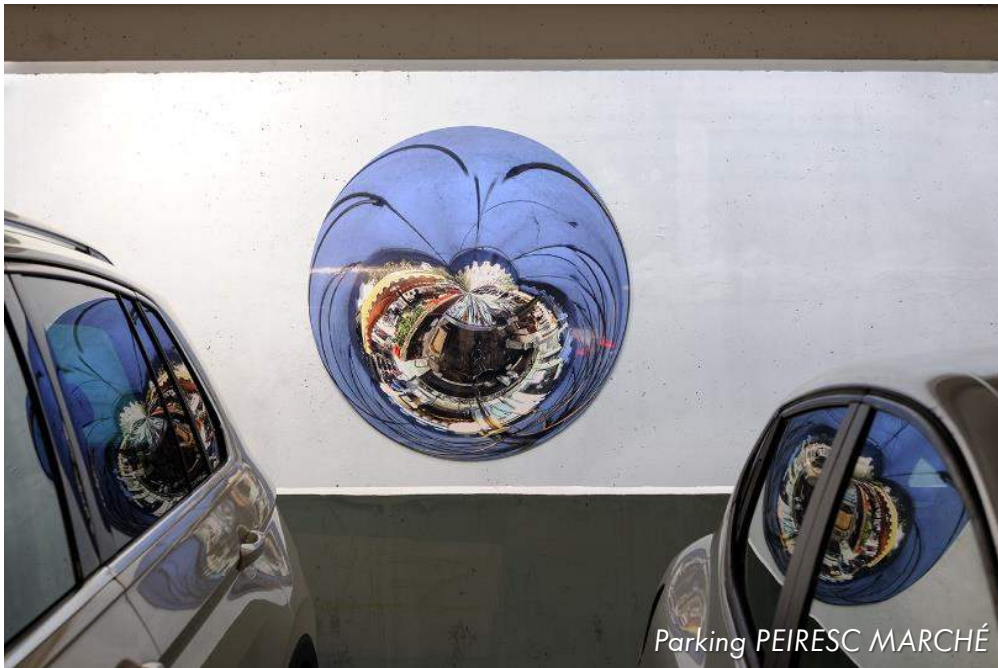

Latest technology for lower environmental impact and increase security

- LED lighting to reduce by 30% the electrical consumption
- New CCTV with 25 cameras
- Q-Park Control Room for security with 25 Parking Hosts
- Automatic speed gate and pedestrian door reader to limit night intrusion
- Defibrillator

Art installations for an original parking experience

- Artwork is from Marin Kasimir, an artist born in Munich Germany, living and working in Brussels and Paris
- A creative concept in 5 parking facilities where he shares an original vision of Toulon's main Points Of Interest (POIs)
- For this parking, the Mediterranean market theme was chosen, as it is nearby and welcomes visitors

New service for smart mobility

- Electrical grid for EV charging
- Secured bike zone with lockers for personal belongings
- Electrical grids for bike charging
- Electrical bike rental service connected with 3 other stations in Q-Park parking facilities
- Motorbike area

Quality in parking
